

Summary of Bird Sightings

Winter Wings Festival 2019

February 14-17

Birding proved to be a bit more challenging than usual with the wintry weather in the Basin over festival weekend. And the particularly cold temperatures and snow prior to the festival kept some species from making an appearance. Nonetheless, intrepid field trip leaders and participants recorded good species diversity during the festival's 40th anniversary event. A complete list of the 121 species that were recorded is below, in taxonomic order. Species in blue are more unusual or rare at the festival.
